

MITEL
LET'S
TALK
GREEN

As the world engages in discussion on the environment, we at Mitel® continue to add our own unique voice. At Mitel we are focused on not only reducing our own corporate footprint, but also on helping other companies reduce theirs.

Mitel achieved ISO 14001 certification in 1999 and has designed and implemented an environmental management system that seeks to reduce our corporate landfill waste and energy consumption, meet set municipal, provincial, and federal legislation, and set into place systems for continuous improvements. As well, we aim to improve the environmental impact of our products, including restricting the hazardous substances in their design, as well as their overall energy requirements with our commitment to a Design for the Environment (DfE) program.

Generate Efficiencies

Consume less energy from the data center to the desktop

- Move from TDM to IP and save up to 90 percent on rack space*
- Draw a mere 0.14 watts per user with the Mitel 3300 MXe Controller
- Replace the approximately 80 watts to operate a PC with Mitel's integrated solution with Sun Microsystems' Sun Ray 2 client's typical four watts
- Choose the Mitel 5212 IP Phone over our largest competitor's phone and use approximately 41 percent less power

*Estimates based on a typical Mitel system configuration.
